

Partnership with sub-national government to implement STBM in NTT Province, Indonesia

Silvia Devina
WASH Advisor
Plan International Indonesia

The CS WASH Fund is supported by the Australian Government
and managed by Palladium International Pty Ltd.

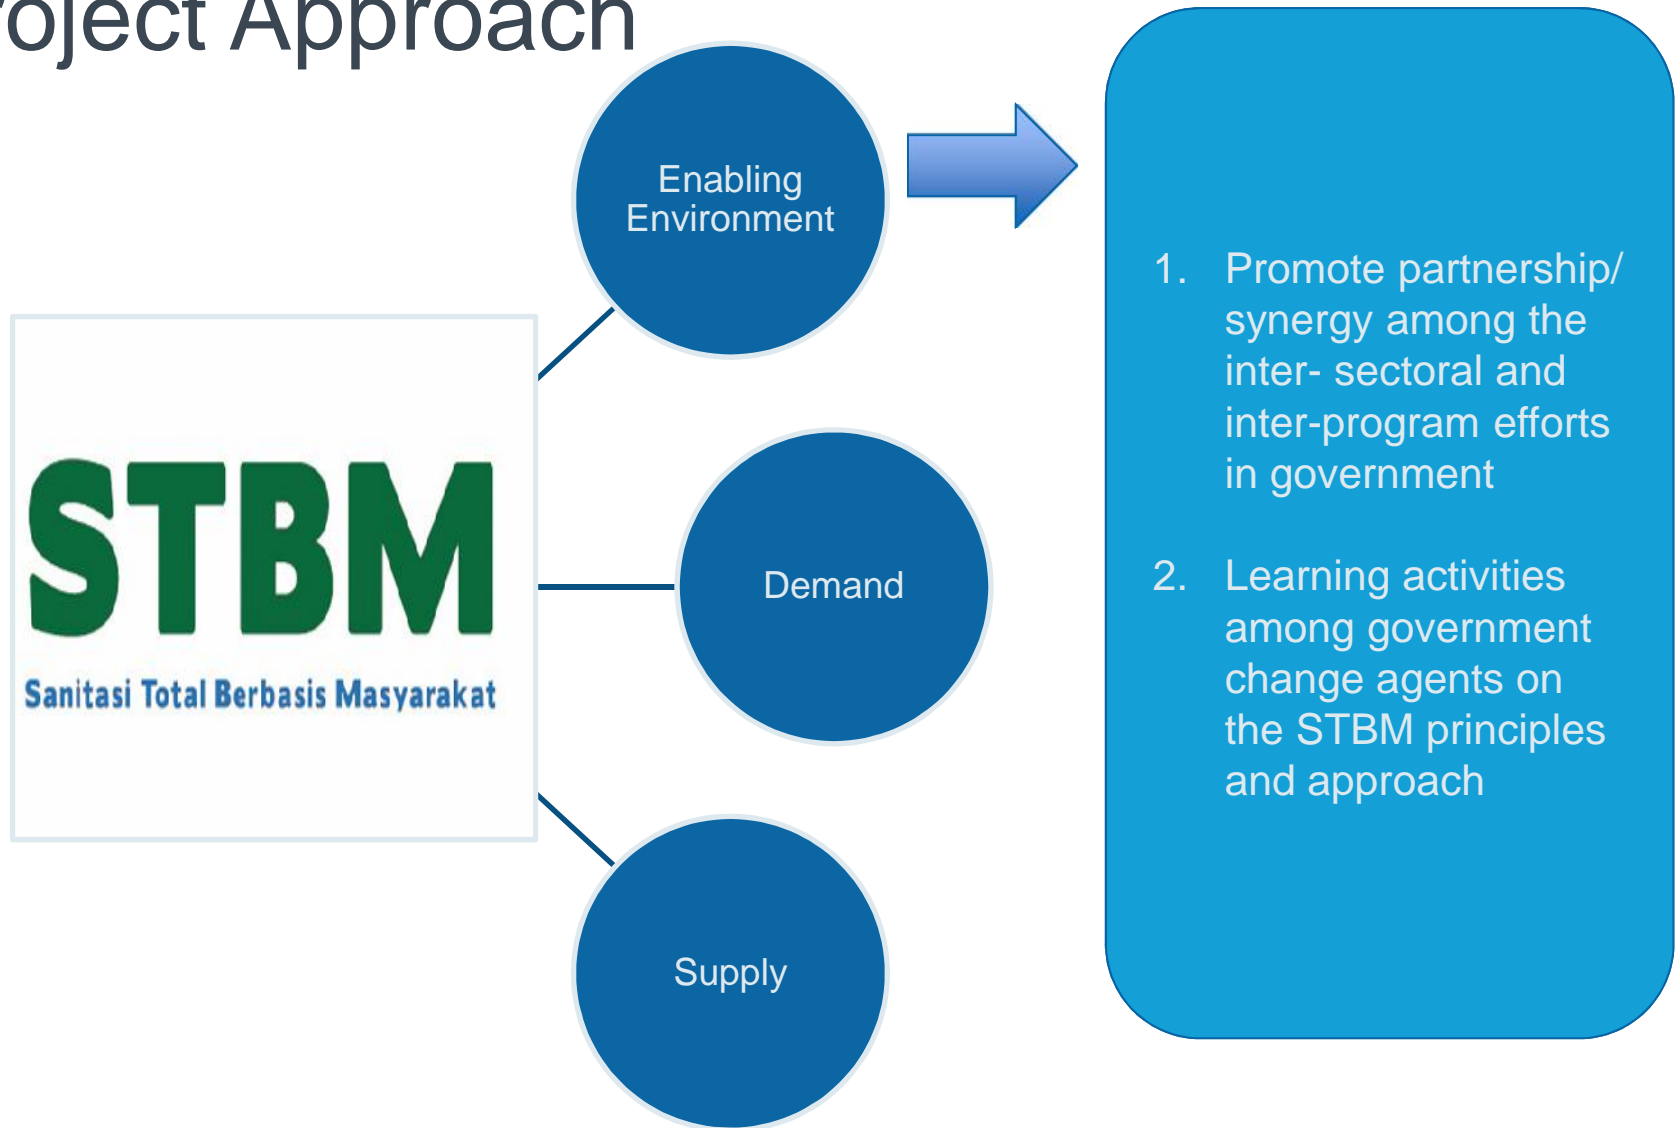

PLAN INTERNATIONAL INDONESIA'S WORKING AREAS OF STBM PROGRAM

Project Context & Challenges

1. The 2015-2019 Medium Term National Development Plan specified STBM (CLTS+) as the approach towards universal access to sanitation in Indonesia.
2. Five districts in East Nusa Tenggara (NTT) province were chosen because of the following:
 - Province had the second lowest % of improved sanitation (28% in 2013)
 - Limited knowledge of STBM at the government and community levels
 - STBM (behavior change approach) was not a priority (only 0.01% budget allocation)

Project Approach

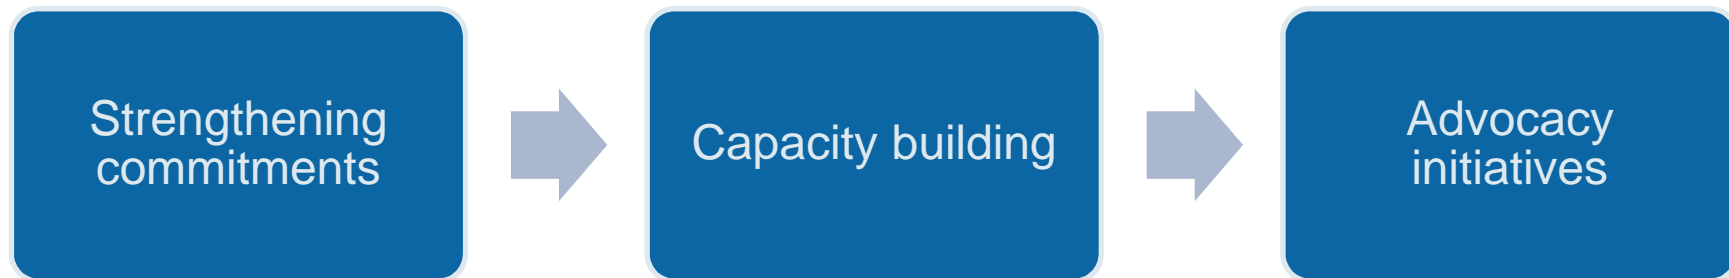

Project Objectives

Support districts governments to ensure communities will benefit from sustainable & inclusive implementation

1. STBM is implemented in 5 districts (150 pilot villages in 15 sub-districts).
2. Districts and sub-districts have functional STBM coordinating committees (STBM Working Groups at the provincial & district level and STBM teams at the village level).
3. Roadmap prepared with adequate budgets to replicate activities to other villages (150 replication villages).

Steps in partnership with local government (province, district, sub-district, and village level)

Government WASH working groups/STBM teams (lead
by the Planning bureau)

Key Interventions

Partnership with local government (province, district, sub-district, and village levels)

1. Strengthening the local governments commitments

- Securing upfront commitments (signed agreements) for STBM implementation, including financial, personnel, and time commitments.
- Established WASH working groups/STBM teams district-village level
- STBM socialization at the provincial & district level through roadshows to bolster awareness and ensure common vision of STBM implementation.
- Development of STBM roadmaps and budgeting plans through participatory workshops involving district working groups and representatives from the provincial & sub-district levels.

Key Interventions

Partnership with local government (province, district, sub-district, and village levels)

2. Capacity Building

- STBM trainings (triggering, aggregated money data, ODF verifications, and disaster risk reduction) for provincial, district, and sub-district working groups.
- Learning-by-doing approach through co-facilitation of STBM triggering and money of progress.
- Regular learning events to promote cross-fertilization among districts.

Key Interventions

Partnership with local government (province, district, sub-district, and village levels)

3. Advocacy initiatives

- Advocacy for support from District Heads and key stakeholders to institutionalize STBM in sanitation programs with specific targets.
- Engagements of traditional/natural leaders and STBM champions to help strengthen local government's accountability.
- Presentation at national events by district government (role model approach).
- Learning exchange/hub through development of KIE materials.

Key Achievements

Five districts have strong commitments to STBM

1. Five-year STBM roadmaps have been developed, enabling stakeholders to have, for the very first time, a common goal with specified timeline for ODF attainment by 2019.
2. STBM has been included in the Mid-Term Development Plans in five districts.
3. 1 provincial and 5 district working works have carried out their functions to provide technical & advocacy support and money of districts' performance in the pilot & replication villages.

Key Achievements

Five districts have strong commitments to STBM

4. 150 pilot and 205 replication villages have established STBM teams under the village heads' decrees.
5. Improved coordination of STBM activities across departments, between levels of local government and among stakeholders (health, public works, education, environmental protection, women empowerment & children protection, and private sectors).

Lesson Learnt

Ensure strong commitments at all levels

- Securing upfront commitments.
- STBM socialisation through multiple consultations, orientation meetings, and field visits to gain support from decision makers (Head of Districts & MPs).
- Cross-learnings among districts & villages to accelerate replication.
- Final evaluation concluded that MOST of the government change agents were satisfied in partnering with Plan International Indonesia.
